New York Endorses Campaign to Vaccinate Kids as Young as 9 Against HPV

In its endorsement of the "Start at Age 9" campaign, the New York State Department of Health called the human papillomavirus (HPV) vaccine "the best protection against preventable cancers caused by HPV infection." But experts told The Defender there's no evidence the vaccine prevents cancer — but plenty of evidence it causes injuries.

The New York State Department of Health (NYSDOH) this month joined California and Kentucky in endorsing a campaign to vaccinate children as young as 9 against human papillomavirus (HPV).

In its endorsement of the "Start at Age 9" campaign, the NYSDOH said, "Getting the HPV vaccine series is the best protection against preventable cancers caused by HPV infection."

The "Start at Age 9" campaign is an initiative of the National HPV Vaccination Roundtable, a coalition of about 70 health organizations, hospitals and universities, including the American Academy of Pediatrics (AAP), the American Cancer Society (ACS) and the American College of Obstetricians and Gynecologists.

The campaign hinges on a collection of articles that, according to the National HPV Vaccination Roundtable, show the benefits, safety, efficacy and acceptability of routinely recommending HPV vaccination for all preteens starting at age 9.*

According to the ACS, these benefits "include a strong immune response, safeguarding children and adolescents against more than 90% of HPV cancers later in life, fewer shots per visit, easier conversations with parents, and more opportunities to vaccinate as more preteens present to more than older teens."

However, experts like James Lyons-Weiler, Ph.D., president and CEO of the Institute for Pure and Applied Knowledge, said claims the vaccine reduces cervical cancer are "misleading."

In a Substack article published Monday, Lyons-Weiler cited a study in the journal of the Royal Society of Medicine that concluded, "It is still uncertain whether HPV vaccination prevents cervical cancer as trials were not designed to detect this outcome, which takes decades to develop."

According to the study, although there is evidence vaccination prevents grade 1 cervical intraepithelial neoplasia (CIN1) — precancerous lesion of the cervix — "this is not a clinically important outcome (e.g., no treatment is given)."

In his Substack, Lyons-Weiler cited an article he wrote in 2017, in which he said:

> "There are a number of studies showing that the partial immunization via available HPV vaccines is not only ineffective at reducing overall HPV infection rates but that the vaccines actually cause rarer, more lethal types of HPV to sweep in. The net effect could be devastating increases in HPV-related cancers."

Dr. Paul Thomas, the author of "The Vaccine-Friendly Plan" and a practicing pediatrician for more than 35 years, described the HPV vaccine as "the most dangerous vaccine other than the COVID jab."

Thomas told The Defender he has personally seen the HPV vaccine "destroy" the lives of two teen athletes in his clinic who received it at school without their parents' knowledge.

Mary Holland, Children's Health Defense (CHD) president and co-author of "The HPV Vaccine On Trial: Seeking Justice For A Generation Betrayed," also commented on the vaccine and its safety record.

"This is an extremely dangerous vaccine that can cause permanent disability and death," Holland told The Defender. "The real dishonesty of good news is that many parents are now refusing HPV shots for their kids."

Kim Mack Rosenberg, CHD's general counsel and co-author with Holland of "The HPV Vaccine On Trial," said pushing HPV vaccination to children as young as 9 "raises serious questions and may be hard for vaccine injuries, in particular injuries associated with reproductive health, such as premature ovarian failure."

Rosenberg added:

> "We know that almost all HPV infections clear on their own. Regular screening is, and for many years has been, an inexpensive and widely available tool to identify cervical abnormalities of potential concern."

Who's behind the 'Start at Age 9' campaign?

The Centers for Disease Control and Prevention recommends HPV vaccination for children ages 11 to 12 but says children "can start at age 9."

In 2018, the AAP recommended starting the HPV vaccination series between ages 9 and 12. The ACS followed suit in 2020.

The Roundtable's 2021 annual conference, opened by the AAP, featured a panel presentation on increasing HPV vaccination rates by recommending children start at age 9.

In 2021, Merck — manufacturer of the Gardasil HPV vaccine and a corporate donor of the AAP Friends of the Children Fund — paid $150,000 in a grant to the AAP to fund adolescent and pediatric immunization programs. The Roundtable began marketing the "Start at Age 9" campaign at its 2022 conference, themed "Vax Like a Champ!"

In February, researchers at Merck published a study in Pediatrics suggesting that moving routine HPV vaccination to ages 9 to 10 may improve vaccination coverage rates in early and mid-adolescence, increasing the odds children will complete the vaccine series prior to becoming sexually active.

95 cases filed against Merck in multidistrict litigation — more expected

In August 2022, a federal panel of judges consolidated more than 31 lawsuits against Merck.

As of Aug. 15, 95 cases were filed against Merck in multidistrict litigation (MDL) in the Western District of North Carolina, and 92 remain open.

The plaintiffs' attorneys at Wisner Baum said they expect the number of cases "to increase significantly in the coming months as hundreds of claims are pending" in the National Vaccine Injury Compensation Program (VICP), also known as "vaccine court."

Plaintiffs in the lawsuits allege they or their minor children developed postural orthostatic tachycardia syndrome (POTS) and/or premature ovarian failure, including infertility — as the result of an autoimmune reaction to the Gardasil vaccine.

According to attorneys at Wisner Baum, "Merck misled consumers by relying on their fear of cancer and by repeatedly stating, representing and implying that it was necessary for girls and young women to take the Gardasil vaccine to prevent cervical cancer."

According to the law firm, those who allege HPV vaccine side effects must first bring their claims to vaccine court before they can file a lawsuit against Merck in federal court.

The most recent VICP data — covering October 1988 through Aug. 1, 2023 — show 822 injury petitions filed for the HPV vaccine. Twenty-two were filed for death, 169 received compensation and 447 were denied.

A joint status report submitted to the MDL indicates that plaintiffs were scheduled to depose corporate representatives for Merck on Aug. 2. In April, the court ordered Merck to turn over all data from its adverse event reporting and vaccine system. However, the company has not yet provided this data to the plaintiffs.

If successful, lawyers estimate the settlements for women suffering POTS, Guillain-Barré syndrome and Chronic Inflammatory Demyelinating Polyneuropathy could range between $150,000 and $750,000, while for those experiencing premature ovarian failure, the settlements could range between $250,000 and $1 million.

This is horrible on so many levels. HPV went from being rare to epidemic and is primarily spread by men and not contact. They never tell us that in school or when they push pap smears on girls. Why is this even allowed and kill based on assumptions of future heterosexuality? Time informed consent!

My God, why does a 9 year old need this? How did I ever survive my pre-teen AND teen years, with almost this cocktail of crapola they keep poisoning children with? This would all go away if parents would STOP abusing their children with all of these NOW. Do Not give them to your children, period.

The children's vaccination program is totally responsible for the chronic illness explosion in children today.
Annual flu shots for older adults is also a contributing factor.
Vaccines do more harm than good.
Any death of a healthy person should be investigated by first checking one's vaccinations.

This is what you get in a totalitarian regime. When are the American people going to wake up? We have been taxed! Socialist Comme on economic trends and economic truths. Catherine Austin Fitts, finance and banking, social program rip offs by government entities, Dr. Steve Gerec the hidden technologies which would save this planet but are hidden by the National Security State ot National Security Orders (if you don't know, the Nat Sec State has the right to override any constitutional rights they want to, at any time). Agenda 21 geoengineering and its destruction of the planet and the planet's air space since 1967. Robert F. Kennedy, Jr. on additional crimes committed against humanity by the Nat Sec State. Before launching most of these people for years, as well as reading their publications. Get them all together in one room, broadcast it worldwide and change might happen.

NOT With dear leader Kathy at the helm!!! Can't say I'm surprised. In just about every case. HPV shots needed!!! It's incredibly common and doesn't lead to increased cases of cancers as they like to say. the vaccine, however, does. But you know, nothing to See here...

How long before these evil, Luciferian scum begin injecting newborns with this toxic garbage? We are living in a totally lawless society that makes the Wild Wild West look tame! These evil entities have been getting away with **Assisted Causing Bodily Harm** and **MURDER** for decades! Justice isn't "blind". It's nonexistent!

1. If your 9 year old is sexually active, you've got far worse problems than cervical cancer 50 years out to be worried about. (I'd say 9-13 year olds, or maybe even 16, but you get the point...)
2. Any info on Gardasil/HPV vaccines associated with Rheumatoid Arthritis?
Thank you Monica Dutcher for your great work.

All vaccines are capable of causing autoimmune diseases and RH is an autoimmune disease.

Perpetuation of the future generations right now. At birth, while mother pregnant with baby with earlier jabs, and now kids of all ages getting a variety jabs of whatever they feel parents will fall for. Sad that it's come to this, sad that children and teens have no say in this kind of direct abuse/invasion of their bodies.

This one breaks my heart. My daughter's health was severely damaged by this 'None' only consolation is that I was able to delay a couple of injuries. Imagine 24/7 pain. For 6 years straight.

Yes! Another motivation is for Genocide with more Medical Food Injit to push on Pre-Teens and Teens! Disgusting vaccine that has killed Kazzillions! Once the Nuremberg Trials supposedly prevents cancer/AIDS/HIV proves a Lie in 1100, the pope instituted "The Hospitalers" &designated the Officials to be a Religion. It is a Pagan death cult, injecting babies with animal DNA. The Gardasil HPV shot is Responsible for Thousands of Serious Injuries of previously healthy Teens/Gardasil Never proven to prevent HPV (again Banned it from Japan) Gardasil Causes Autoimmune Disease, Chronic Pain, Paralysis, Seizures & Death. It is linked to the Autoimmune epidemic including Guillaribar Syndrome that is often times fatal/Made resurgence. since the unveiling of increased vaccines. RI is a Autoimmune disease which several vaccines have caused an Al epidemic chronic illness All containing foreign DNA. Animal/Fetal-Aluminum heavy metal particulates/

If parents haven't become aware of the destructive power of this vaccine on girls as well as boys then they have not been paying attention for the past decade. Shame on them for not keeping abreast of what is happening and shame on them for not protecting their children from the CDC and WHO.
